

REFITTING LISTED LUMINAIRES

INSELSPITAL, BERN | HEALTHCARE INDUSTRY

Beraplan AG from Lyss was charged with refitting the listed luminaires at Inselspital Bern. Beraplan specialises in electrical planning and building automation. The company engaged Tulux AG from Tuggen to carry out the renovation of the light fittings – and was impressed by the excellent execution. Thanks to Tulux, the listed luminaires now comply with modern lighting standards while still maintaining their original appearance.

The Lory-Haus, built in 1930, and the Anna-Seiler-Haus, built in 1953, are two of the impressive buildings belonging to Inselspital Bern. Both buildings are listed, which means that when it comes to the luminaires, the shape, appearance and character of the basic fittings need to be maintained. Thus, only the interior construction of the luminaries could be refitted. In concrete terms, this means installing an LED fixture inside the luminaire. In collaboration with Tulux, Beraplan accordingly refitted the luminaires in the hallways of the Lory-Haus and the conference room of the Anna-Seiler-Haus.

When it comes to tackling projects that need to be tailored to meet individual requirements, Beraplan likes to work with Tulux. CEO Andy Rindlisbacher and deputy partner Beat Hänni have been impressed by Tulux's professional work for many years. Tulux works with professional advisors who plan and carry out the refitting process together with the Tulux team. Thanks to the collaboration with Tulux, Beraplan was able to find a sustainable solution for Inselspital Bern that complies with the requirements for listed luminaires. Tulux is able to assess, reconstruct and refit luminaire structures in a resource-friendly way. Tulux is a specialist in this unique service area, and one in which Beraplan places its trust. Andy Rindlisbacher and Beat Hänni value Tulux highly:

“Thanks to the professional, reliable and sustainable collaboration with Tulux, we are able to deliver 100% satisfaction to our customers.”

Electrical planning

Beraplan AG from Lyss has been carrying out electrical planning for Inselspital Bern for many years. This includes the unique lighting concept for the hospital's listed buildings. Electrical power is extremely important today, but progressive and sustainable solutions are expected. This calls for forward-thinking electrical planning that meets the necessary requirements. Beraplan has been providing tailored solutions for electrical planning and building automation for over 30 years. The company relies on the substantial knowledge of its eight electrical specialists. Together, they find the perfect solution for each project in terms of energy and the environment.

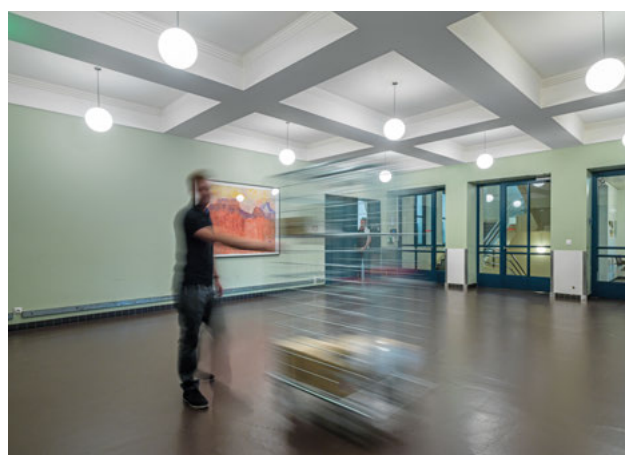

Andy Rindlisbacher knows how advanced electrical solutions should be planned.

Sustainable procurement and refitting of listed luminaires

When it comes to renovating listed luminaires, Tulux works with customers to develop individual lighting solutions in accordance with the relevant regulations and requirements, and plans the implementation of new LEDs. Based on the concept, specifications for the refitting are drawn up and a simulation used to make initial prognoses. After all, good solutions are always a synergy between design and construction. Based on the construction plans, Tulux makes tools, bends metals and moulds plastics to bring new life to the luminaires. In the Tulux measuring laboratory, properties are tested, resistances are identified and weak points are uncovered at an early stage. These are then analysed and the causes rectified. Lastly, an assessment is made of the quality.

In Tulux, customers have a competent partner that accompanies and supports them and their vision from the idea generation to the finished installation. As Tulux develops and manufactures everything under one roof, the products' functionality is guaranteed. The entire Tulux team works to ensure that the project shines and inspires all who behold it.
